Ladies and Gentleman!

"We like to rely on experienced captains in rough seas." This saying has proved true once again for ZEMAN as a partner for exceptional projects on critical markets. With the "Hidden Champion" award, a follow-up commission to build a production hall with silo tower and to expand and renovate the Krakow-Balice international airport in Poland, ZEMAN has shown that professional and innovative project planning and implementation pays off.

**What's new from ZEMAN & Co – your partner for complex architectural and industrial steel construction in the ZEMAN-Group**

**Award for outstanding services to Austria's export business for ZEMAN & Co**

With the "Hidden Champion" award from the Austrian Chamber of Commerce, ZEMAN is once again demonstrating its considerable services to the Austrian export economy. ZEMAN was given the honour of accepting this year's award on 24th June during the export conference.

Besides the company's great economic strength and sustainability, it was particularly ZEMAN's expertise as a general contractor, namely everything from one source, the company's high standard of reliability and innovation that led to this success. You can

find more information [here](#).

**PEM**  
BUILDINGS

**What's new from PEM – the commercial and hall construction professional in the ZEMAN Group**

**PEM impresses with production hall building plus silo tower in Novomoskovsk**

The PEM company based in Mauthausen/Austria was able to impress with its reliability and quality during the construction of a production hall in Neuburg for the Knauf company and received a follow-up commission in the currently very difficult Russian economic zone to build an identical hall in Novomoskovsk/Russia. The commission for the 9,000 m<sup>2</sup> production hall for aqua panels plus silo tower includes the planning, production and construction supervision for all the building work from the top edge of the foundations. The construction of the new production hall in Novomoskovsk is supposed to be completed in just three months in November 2014. The construction of the silo tower starts in spring 2015.

**What's new from ZEMAN HDF – the specialist for design, planning and installation of geometrically complex cupola supporting structures made of steel and glass in the ZEMAN Group**

**ZEMAN HDF impresses with airport projects and is commissioned with the expansion and renovation of the John Paul II International Airport Krakow-Balice in Poland**

Having successfully completed airport projects in Lublin, Modlin and Warsaw ZEMAN HDF is facing a new challenge of an unprecedented dimension: the expansion and

renovation of Krakow airport.

The commission includes the construction of a new airport building, the partial demolition of the existing building, the construction of a new building in the same place and the fusion of the two buildings into a large functional and architecturally impressive airport facility, which will meet the growing demands of the city of Krakow. With 4,800 tons of steel used in the construction of the main building and the façade structure's prism made up of triangles, which is being manufactured in ZEMAN's own company Zekon in Poland, this project is the largest in ZEMAN HDF's history. The new airport in Krakow will be completed in the middle of 2015.
